RODRIGO DE LIMA SANTOS

BACKEND DEVELOPER | WEB SYSTEMS DEVELOPER | SYSTEMS ANALYST

Maracanaú, Fortaleza/CE, Brazil | +55 85 98684-5634 | sr.hrodric@gmail.com
Portfolio: rs-port.web.app | GitHub: github.com/srHrodric

PROFESSIONAL SUMMARY

Web systems developer with experience in technology since 2017 and a focus on backend development using JavaScript (ES6+), Node.js, Express, REST APIs and relational databases. Experienced in implementing and maintaining SaaS platforms, business rules, ERP integrations, requirements analysis, troubleshooting and production support. Hands-on across the software lifecycle, from understanding business needs and defining solutions to deployment and maintenance.

TECHNICAL SKILLS

Backend: JavaScript (ES6+), Node.js, Express, PHP, REST APIs
Databases: PostgreSQL, MySQL, Sequelize, Firebase Realtime Database
Frontend: HTML5, CSS3, Bootstrap, EJS, jQuery, responsive interfaces
Infrastructure: Linux VPS, Nginx, PM2, application deployment and maintenance
Tools & Practices: Git, GitHub, SCRUM, debugging, requirements analysis, business rules, use AI

PROFESSIONAL EXPERIENCE

Freelance | Web Developer - *2020 – Present*

- Developed and maintained web applications and systems according to client requirements.

Alli Solutions | Backend / Web Systems Developer - *2023 – Present | Contractor (PJ)*

- Develop and maintain web systems, investigate issues and implement improvements across business applications.
- Analyze requirements and business processes, evaluate use cases, and define implementation approaches in collaboration with the technical team.
- Build and maintain web interfaces and backend services for a large meal management platform, including approximately 160 screens and reports.
- Develop and integrate REST APIs consumed by ERP systems and other services.
- Configure and maintain application infrastructure on VPS environments, including Linux, Nginx, databases and PM2.
- Provide technical support and troubleshoot production issues.

Serlares | Web Systems Developer - *2022 – 2023*

- Designed and developed an electronic service invoice (NFS-e) portal from scratch using JavaScript, Bootstrap and web technologies.
- Implemented supplier onboarding, invitation flows, first-access credentials and email validation.
- Developed validation rules for XML files, company tax IDs (CNPJ), municipalities, suppliers and branches.
- Implemented configurable cost allocation rules by supplier, branch and department, including proportional calculations and overrun handling.
- Built a REST API for integration with the company's ERP system.
- Delivered a responsive, multi-device interface.

Municipality of Maracanaú – Human Resources and Assets Department | IT Support Assistant - *2017 – 2022*

- Provided technical support to users and assisted with the maintenance and development of internal systems and the municipal technology infrastructure.

SELECTED PROJECTS

ChurchLog | Multi-tenant SaaS / Church Management System - *Independent project | 2019 – Present*

- Independently conceived and developed the system, covering product definition, architecture, database, backend, frontend and business rules.
- Designed a multi-tenant structure with separation of data across organizations and branches.
- Implemented authentication and session controls, including PASETO-based tokens and inactivity handling.
- Developed modules for meetings, events, attendance registration with QR codes, library management and educational activities.
- Implemented data validation, database error logging and automated email notifications and alerts.
- Maintained and modernized the interface, including migration from Bootstrap 4.6 to Bootstrap 5.

Meal Management Platform | Web Systems and ERP Integration - *Alli Solutions*

- Developed and maintained a substantial part of the web layer, including approximately 160 screens and reports, database-related work and integrations with ERP services.

NFS-e Portal | Supplier and Invoice Management - *Serlares*

- Created the original portal, including supplier workflows, XML and company data validation, configurable cost allocation and ERP integration through a custom REST API.

EDUCATION

- Technology Degree in Systems Analysis and Development – UNIASSELVI (coursework completed through the 3rd semester; degree not completed).
- Technical Diploma in IT, with an emphasis on Software Development – Escola Técnica de Maracanaú.
- High School Diploma.

LANGUAGES & CERTIFICATIONS

- English: Basic (A1) – EF SET.
